No Need For Pa. Pullet Program, Industrymen Testify At Hearing

HARRISBURG — Poultry and allied industry people went on record overwhelmingly opposing the Pennsylvania Approved Pullet Grown Program at a hearing on the subject Tuesday afternoon in the State Department of Agriculture building.

The proposed program is a voluntary, state-supervised, pullet-growing plan, which Department officials claim would help standardize and upgrade the production of replacement pullets in Pennsylvania.

Deputy Secretary of Agriculture Jack R. Grey, serving as chairman for the hearing, ordered the proposed program be read aloud in its entirety to the group As this was being done, one hatchery representative challenged the basic premise of the program as set forth in the first paragraph, particularly the last sentence which stated that such a program would be beneficial to the seller and the buyer of pullets.

"What conditions are present in the industry today that would make such a program of any benefit to either grower or buyer," the hatcheryman demanded? He suggested there was no point in reading any further in the proposal because the supposition by the state that there was a need for such a program was incorrect.

In reply, E J. Lawless, chief of the Bureau of Markets'

Freeman Raises Wheat Allotment

In response to strong demand for wheat exports, and reduced storage stocks, Secretary of Agriculture Freeman recently announced a 15 percent increase in the national acreage allotment for the 1967 wheat crop.

The effective allotment in 1966 was 51.6 million acres, Freeman said. The increase will raise that total acreage figure to 59 3 million. This will mean, the secretary said, that wheat acreage on most farms in 1967 will be at a level equal to the period of 1955 through 1961.

"For the first time in 13 years our June carryover will be under 600 million bushels," Freeman said, adding that that figure is an average year's supply for domestic consumption

He predicted that this acreage increase, coupled with continued strong demand in the market, will substantially increase farm income in 1967.

Farm Calendar

May 15—Rural Life Sunday, begins Soil Stewardship Week—May 15-22.

May 18—Spring Southeast Region 4-H Leaders' Forum at Reading Motor Inn

—4-H Wildlife Club meets at Lititz Springs Park, Lititz

May 20—20th through 22, Lancaster County Horse Show at Lancaster Riding and Tennis Club grounds, Lincoln Highway West, Lancaster.

—8 p.m., 4-H Horse Club at Farm Credit Bldg., Lancaster. Speaker, James Gallagher, Penn State livestock specialist.

New Division Developed At Penn State

A Division of Food Science and Industry is the newest development in the College of Agriculture at Penn State University. The division serves to coordinate and integrate instructional and research programs in a number of departments, announces Dr. Donald V. Josephson, head of the department of dairy science. Josephson will serve as division chairman for the first three years.

The new division includes the departments of animal science, dairy science, horticulture, and poultry science. Josephson says the division will also draw upon other departments having phases of instruction related to the food sciences, such as agricultural engineering and agricultural economics and rural sociology.

Orval Bass

SCS Conservationist Attends Management Training Conference

Lancaster County SCS work unit conservationist Orval Bass recently returned from a management training conference, held last week on the Michigan State University campus.

The conference, sponsored by the U. S. Soil Conservation Service, was held at the Northeastern Regional Training Center. It featured many authorities in the field of management from Michigan State University, Michigan University, and SCS Such subjects as human relations, communications, principles of supervision, training and employee development and management improvement are studied in these training conferences, SCS reported

The objective is to strengthen the management skills of SCS leaders.

Co. Angus Breeder Builds Better Gate; Buyers Beat Path To Fred Frey's Farm

Like the world desperately seeking the builder of the better mousetrap, livestock producers over a twenty-state area are seeking out the Twin Oaks Farm of Fred Frey, Quarryville R2, these days Why? Because Frey designs and builds gates and assorted metal products which appear to do the job better than anything previously available

Frey, known locally as one of the largest breeders of Angus cattle, and as an outstanding showman, has been gradually increasing his prefabricated fence and gate business as well as custom design and building of those products This "sideline," born about four years ago out of the need for better gates on the home-farm, has now grown to the point where its income potential rivals that of his 60-head brood cow herd, Frey said.

"About 75 percent of our work is done on a custom basis," Frey said, adding that he has done jobs as far away as Missouri, constructing a beef barn, feeders, stalls and gates. One of his most recent contracts is with Penn State University, relocating and remodeling a livestock barn.

Fred and his brother Ernie fabricated their all-steer, all-welded, gates and fences right on the farm where they have a complete welding shop. Everywhere one looks in the shop there seems to be special homemade jigs for holding, crimping, or pattern copying Each product, Frey said, is the result of recognizing a need and then, through trial and error, building something to do the job The Freys combine inventing, building, and improving techniques to turn out their specialized products.

SWCD Directors Meet With ASCS

The Lancaster County Soil & Water Conservation District directors met Monday night at the Agricultural Stabilization & Conservation Service office on Manheim Pike, Lancaster, with several cooperating agencies.

No final action could be voted for lack of a quorum of directors, but the group received eight new cooperator agreements totaling 382 acres, and discussed plans for the annual county plowing contest, which has been tentatively set for the last week in July.

Several sites for the county contest were considered, but no decision was reached. Associate director Forney Longenecker suggested that greater participation in the plowing contest by Young Farmer As-

Potatoes are for cookin'—not for cullin'

DITHANE M-45 controls early and late blights—the most serious threats to quality and productivity in potatoes. DITHANE® M-45 is unlike any other potato fungicide you can buy. Its unique, new formulation combines zinc, manganese and di-thiocarbamates into one powerful blight fighter. This superior fungicide is effective under severe conditions such as high humidity caused by the weather or by irrigation. DITHANE M-45 protects foliage tenaciously, an ability of critical importance if rainy weather should delay your spray program.

Ask your dealer for DITHANE M-45. It is tough on blight fungi but gentle on foliage. Use DITHANE M-45 on your potatoes all season and get the best available blight control fungicide on the market today.

Weekly Poultry Report

Eastern Pennsylvania And New Jersey
WEEKLY SUMMARY

LIVE HENS

Prices unchanged on light hens. However, isolated negotiations in Pa. section reportedly ranged as high as 12¼-12½c. Demand good. Offerings, though moderate, continue barely adequate for processor requirements. Buying interest for heavy hens fair. Offerings barely adequate. Prices paid @farms: Light hens. 10-12 mostly 11-11½c; Heavy hens 20-21c.

Fogelsville
May 10, 1966

Hens light 10-12, mostly 10-11½. Hens, heavy 12-28; Pullets 25½-36½, mostly 32-34½; Roasters 22½-37½, mostly 26-36½; Turkey Hens 29-33½; Rabbits 35-65, mostly 53-56; Guineas 100-115; Pigeons (per pair) 90-160, mostly 90-100; Jumbo Squabs 87½.

Total Coops Sold: 420.

Eastern Shore Exchange
WEEKLY SUMMARY

Prices for broilers and fryers on the Eastern Shore Exchange continued to climb this week with the weekly lot average price hitting 18.28 cents, a gain of more than ½-cent over last week's average.

Prices paid ranged from a 19 9-cents high on Monday to a low of 17.3 cents per lb. on Wednesday.

Sales for the week totaled 1,294,900 head, off slightly from the preceding week.

Delmarva
May 12, 1966

Delmarva broiler fryer lot average prices declined .2-cent today with a fair demand for moderate auction offerings. Live supplies continued adequate for needs with sizes generally well distributed.

Estimated slaughter for today, 840,000 head, compared to 861,000 head last Thursday.

In the 24 hours preceding market close on Thursday, prices paid at farms for broilers and fryers ranged 17 3-18 6 cents per lb Reported sales totaled 1,031,100 head.

For best control of Alfalfa Weevil

Spray DOUBLE-M†

MALATHION *AND* METHOXYCHLOR

Combination more effective than either Malathion or Methoxychlor used separately

State experiment stations recommend Malathion/Methoxychlor combinations, such as Allied Chemical's DOUBLE-M Spray, for best control of alfalfa weevil, spittlebugs and aphids on alfalfa and clover.

Use DOUBLE-M spray on first crop and stubble, and on second and further cuttings if tips show injury.

Send the coupon for full details.

From Where We Stand . . .

Crisis In The Countryside

This is the battlecry of the conservationist as the nation prepares to observe Soil Stewardship Week — May 15-22. We are pleased to print the following statement of Soil Conservation Service administrator D A. Williams as he describes the crisis in the countryside.

Today, there is indeed a "crisis in the countryside" — or rather, two crises. One is the continued wastage of the land through erosion and improper use. The other is the result of man's partial success This is the crisis of complacency about conservation.

Why this complacency? Perhaps it is because the need for increased conservation measures does not immediately strike the eye The supermarkets are full — today. The dust may not be blowing — today And so we concern ourselves with the big headlines — wars, space, missiles, murders!

These are serious matters indeed. But, we lose more of our land every year to silent erosion than we have ever lost, or shall ever lose, to a foreign foe. Where is the battle cry for this?

What happens to the eroding lands in Missouri and Montana affects us more directly than our landing on the moon. Where are the pleaders for this? And — no matter what weapons of the future we develop — the most modern army in the world still travels on its stomach, still depends on the bountiful earth we take for granted

Do not misunderstand me Our activities around the world, and out of it, are very necessary. But I will firmly believe to the end of my life that there is no work more important, now or for the future, than conserving and enriching our own land, the basis for our life, our living, our national wealth.

Yet, we lose each year, through erosion and other forms of preventable damage, about 500,000 acres of formerly productive land. The bulldozer and the builder take another one and one-third million acres of the best land every 365 days for highways, factories, housing and so on. Our rivers continue to flood and destroy homes and hopes. Our water supply runs short, becomes polluted, erodes the land And, as much of our land disappears, our population and that of the world increases.

Yes, our supermarkets are still full. Our time has not run out But, quite literally, the sins of our forefathers are being visited upon us We cannot afford to be wasteful in the future, if we desire our children's children to inherit an affluent America. We must plan more intensively, farm more wisely, care more urgently. And we must make sure the city man understands that what happens in rural America affects him immediately and profoundly.

We call our land "God's country," and it is. Let us clearly acknowledge it is our job to keep it that way. Farmers and ranchers, as the chief soil stewards, have the heaviest responsibility. They, of all people, know the conservation job is far from done. Thirty percent of our land is being properly treated. What about the other 70 percent?

As we acknowledge Soil Stewardship Week, let us indeed thank God for this country, and for the thousands of dedicated people working to keep it rich and bountiful — especially the officials and cooperators of our 3,000 soil and water conservation districts. And then — let us get off our knees and go back to work

★ ★ ★ ★

Frost Bites County Growers

Not worms, but frost, rewarded the early-bird crop farmers in the area this year With low temperature readings ranging from 33 at Safe Harbor to 26 at Mount Joy on Tuesday night, a spectacular late-and-hard freeze nipped strawberry, sweet corn, tomato, and tobacco plants, and fruit trees in the county.

Early estimates of damage were spectacular in what was labeled as the worst frost in local history. One grower reportedly lost 35,000 early tomato plants; another crop farmer reported 20 percent of his strawberry plants with blossoms would not be producing early berries this year.

Spotty damage on tobacco seedbeds was also reported. According to Henry Engle at the PSU Southeastern Research Farm, plants under plastic arches were nipped, but he felt the plants would grow out satisfactorily.

The effectiveness of irrigation as a means of protecting tender plants from crippling cold by wrapping them in coats of ice was impressive. At the Amos H Funk farm, Millersville, there is an alarm bell which rings when outside temperatures drop to 34 degrees At 33 degrees Funk turns on his sprinkler systems This irrigation-freezing process undoubtedly saved many plants at Funk's, and helped minimize his losses

As more and more growers install irrigation systems this new method of protecting plants from late spring frosts may be an added bonus.

THE BIBLE SPEAKS

International Uniform Sunday School Lessons

BY DR KENNETH J. FOREMAN

Coup

Lesson for May 15, 1966

Background Scripture: II Kings 11 through 12; II Chronicles 22 through 24.
Devotional Reading Isaiah 26: 1-9.

A little girl who lived with her parents, missionaries in an Oriental city, came running to her mother's room early one morning. Shots were being fired in the streets. "What's that?" the little girl asked. Her mother answered sleepily, "Oh, another coup, I guess." "Then that's all right," said her daughter, "it's all the same no matter who wins", and off she went happily to bed again.

Dr. Foreman

Coup is the modern name for what used to be called a palace revolution and also a revolt, a sudden military strike intended to put the reigning administration out of power (by imprisonment or death) and install new men in their place. Our Bible assignment this week tells of a successful coup organized by a priest, a coup that really was worthwhile, one that lasted at least a century longer than most coups do.

WHY THEY DID IT

Athaliah, the queen in residence, was definitely a "bad egg". She began her public career by killing all her grandchildren. This was even worse than it sounds. Athaliah was not a Hebrew, but a foreigner — a daughter of the unscrupulous and unspeakable Jezebel. The throne of the kingdom of Judah belonged by popular will and the providence of God to the family of David. By killing off her grandchildren, Athaliah thought she would have "established" her claim to the throne. And so she would, if she had really killed all the children. But there was one small baby she did not know about (she was not the kind of grandmother who keeps up with all her family). This baby, named Joash, or Jehoash, was hidden in a bedroom belonging to the high priest. There he stayed for seven years, unknown to all but a trusted very few. The whole nation accepted Athaliah because they thought they had no choice. So her irresponsible tyranny went on for seven years, while the good priest Jehoiada (incidentally, he was of royal family connections also) bided his time.

HOW THEY DID IT

The big coup came off on a Sabbath. The high priest managed it down to the last detail. You can read those details for yourself in the Bible. Essentially the plan called for tripling the number of soldiers on duty at what we would call "church time", introducing the boy king to the army men, (and what a thrill it must have been to see a real live lawful king, even a child, after seven years of Athaliah!) and hailing the young heir to the throne as King of Juda. Athaliah was a little late getting to the temple court, and saw that something had happened. Then when she heard the shouting "Long live the King!," she turned on the high priest. "Treason!" she screamed. But she was (no doubt) pointing her finger at the high priest and the boy king, whereas she should have been pointing at herself. Anyway, in a few minutes the soldiers carried out their orders, and "the wicked old witch was dead."

THINKING ABOUT COUPS

So the people were as happy over this coup as they had been unhappy over Athaliah's. All this gives us something to think about, in our world where coups of one sort or another are being pulled all the time, — Santo Domingo, Cuba, Jakarta, Korea, Congo, Moscow, to name a few in recent months. The Bible gives us some hints of how to look at these things. Some coups, rebellions, political shake-ups, are good, some are bad. Few are wholly bad, few wholly good. Athaliah's own coup was wickedly selfish. The coup that killed her was unselfish since the high priest ran a good deal of risk and could get nothing personal by the event. Force, even violence is in itself not good nor bad. Whether it is a blessing or a curse depends on who uses the force, and how, and why.

ATTEND THE CHURCH OF YOUR CHOICE SUNDAY

Now Is The Time . . .

By Max Smith, Lancaster County Agent

SMITH

To Delay Alfalfa Harvest After Spraying

Alfalfa growers who spray their first cutting with one of the insecticides to control weevils, are urged to recognize the proper time between spraying and harvest This time is necessary to permit the insecticide to break down sufficiently and eliminate the danger of any residue The waiting period ranges from 7 to 21 days depending upon the material used

To Remove Strawberry Blossoms

New plantings of strawberries will need some attention this spring in addition to the control of weeds All flower stalks should be removed, preferably before blossoms appear If these are allowed to develop, the vigor of the plant is decreased and runner production is retarded To get a maximum yield next spring from a new planting, the effort should be to get a maximum number of strong runner plants as early this season as possible.

To Recognize Stage Of Maturity

One of the most important items in the harvest of quality forage crops is to cut the material at the proper stage of maturity Most grass crops will decrease in feed value as they near maturity All grasses are best at heading time, small grains at early flowering or dough stage (except rye — heading time); legumes in the bud to early blossom stage. Mature forage crops might be easier to cure but have lost too much feed value.

To Clip Pastures

Most pasture grasses and many weeds will be going to seed in the next two weeks; to get the maximum amount of grazing from this area we suggest that it be clipped several times during the summer, starting this month New grow-

(Continued on Page 8)

THESE PESTS CHEW TOBACCO ...UNDERGROUND:

WHITE GRUB—This insect chews up tender roots as fast as they develop.

WIREWORM—Burrows into stem of tobacco plants.

CUTWORM—Chews on young plants

Read how low-cost aldrin gives long-lasting control of soil insects that destroy seedlings, cut tobacco yields and quality.

A WHOLE army of insects threatens tobacco during the growing season. Wireworms burrow into the stem. Cutworms chew on young plants. White grubs attack the roots.

Aldrin stops all major soil insects attacking tobacco. It controls the insects you see above plus annual grubs and flea beetle larvae. One aldrin application cleans up wireworms so thoroughly you may not need to treat again for 2 to 3 years. (If you have a cutworm problem the second or third season, apply dieldrin.)

By destroying soil insects *before* they do damage, aldrin allows tobacco plants to develop deep, strong, healthy root systems. Leaves mature faster, develop evenly. Plants are more vigorous and disease-resistant.

RESULT: Aldrin returns its cost many times over in higher tobacco profits.

Aldrin-treated tobacco (*right*) is about 8 feet tall. Untreated tobacco (*left*) is about 5 feet tall.

How to use aldrin

As little as 2 to 3 pounds of aldrin per acre applied as an overall broadcast treatment before planting will give season-long control of all major tobacco pests.

As little as 1 to 4 ounces of aldrin per 50 gallons of water, applied in the setting water during transplanting, will stop root maggots and wireworms—insure a good stand.

Where to get aldrin

Aldrin is available from your local insecticide dealer under various well-known brand names. It comes as liquid, wettable powder, granules, and in fertilizer mixes. Look for the name aldrin on the label or in the ingredient statement.

Shell Chemical Company, Agricultural Chemicals Division, 2299 Vauxhall Road, Union, New Jersey.

The Man In The Front— RANCK

Experience counts, but it doesn't make the man. Unfortunately, the halls of Congress and our State Legislature are replete with men who have stayed too long, done too little for their country. Nor is it sufficient for a candidate to say simply that he will vote according to a consensus of his constituents. If this be the only area of responsibility demanded of a Congressman, we would all be better, more efficiently served by an electronic computer. If you agree that we need a man who can think clearly, who can speak with the courage of his convictions, who is a mature, respected citizen in his own rights; then you will agree that the Country, 16th District and Republican Party needs a man in Congress of the stature of John Milton Ranck.

VOTE FOR RANCK for CONGRESS - REPUBLICAN 16th DISTRICT

Ranck For Congress Committee, 11 S. Duke St, Lancaster — Otto F. Messner — Howard H. Bailey, co-chairmen.

Pullet Program

(Continued from Page 1)

Poultry and Egg Division, stated that the program had been requested by industry.

"Who, specifically, are the people who requested it," the hatcheryman asked.

"Under the rules of the Department such information is classified," Lawless replied, adding that the names could not be devulged.

"Well, we are the industry," the hatchery representative said pointing out the twenty-five others in the room, "and we are not interested (in the program)."

Further back and forth discussion of the program's benefits, or lack of benefits, continued.

One feed company executive, who described himself as sometimes a buyer and sometimes a seller of pullets, asked the state officials what the program would do for people that was not already being done by reputable raisers and supervisors of pullet flocks. "How is the expenditure of this time and effort going to help the industry," he asked.

The reply was that although the full benefits could not be determined until the program was in effect, it was certain to help standardize the production of good pullets.

In response to Grey's question on whether anyone present was in favor of the program, two poultrymen volunteered that it might be worthwhile, each adding that he was no longer involved with buying or selling pullets.

Some confusion prevailed on the term "Approved" which appears in the title of the program. Lawless explained that it did not amount to an accreditation of a flock, as such; it only indicated that approved sanitation procedures were followed, and attested to, the accuracy of the flock records. It will help the buyer "to see the case with his eyes wide open," Lawless said.

Following a complete reading of the proposed program, it was suggested by Grey that everyone present who was opposed to the measure should so indicate by signing his name on a pad that was circulated. He lamented the fact that those industry peaple who had requested this program had not seen fit to attend the hearing and state their case. He said the opinions expressed at the hearing would be considered in further departmental discussions.

SWCD

sociation members might be gained by working through the high school agriculture teachers.

Perry Hilbert, representing the State Game Commission, reported that two-thirds to three quarters of the properties in the Middle Creek project had been settled, and that condemnation procedures had begun on the remainder.

County SCS conservationist Orval Bass reported on work his department has completed since January 1. This included: 31 new cooperators; 243 farms called on; 134 farms applying conservation practices, 57 new plans written; 3685 lineal feet of diversion; one pond; eight acres of waterway; 642 acres of contour strips; 8500 lineal feet of terraces; and three acres of trees. He reported that 2768 acres of land had been adequately treated.

Weather Forecast

The cold weather is going to stay around awhile says the weatherman, with temperatures for the next five days averaging much below the normal range of 75 to 51 degrees. It is expected to remain cool throughout the period with little day-to-day change.

Rainfall during the five-day period may amount to more than ½-inch, and is anticipated for Saturday and again early in the week.

Super Q isn't a miracle fertilizer.

No matter what anybody says.

We will admit, though, that the farmers who use Super Q as part of a sound management program get some pretty spectacular results.

Take A. E. Cappoferri of Cherry Hills, N.J. With the help of Super Q for Tomatoes he harvested 41½ tons of tomatoes per acre in an area where 18 tons is considered average.

Then there's Luther Edington of Shelbyville, Kentucky, who's been using Super Q for Tobacco for three years. Last year he averaged an outstanding 3,154 pounds of tobacco per acre.

How about corn? Last year our Super Q for Corn helped set an all-time yield record of 161 bushels an acre in the National Corn Picking Contest in Eastern Michigan.

And we could go on and on with yield records in wheat and barley and oats and cotton and potatoes...

Spectacular? Yes. Miraculous? No.

Most farmers can never hope to approach production levels like these. But if you're the kind of outstanding farmer whose land is fertile enough, whose cropping and fertilizing methods are progressive enough, and whose goals are high enough, Super Q can offer you a product and a program which together can bring you larger returns than you could ever hope to gain with conventional premium fertilizers.

To find out more about Super Q —the product, the concept, and the program—see your Super Q supplier now.

SANGER
FOR STATE
Senator

THESE FOUR YOUNG HEIFERS were sold to a breeder in Tennessee and are shown above waiting for the truck that would carry them south. L. F. Photo

FEED IS AUGERED to these steers with a minimum of investment in equipment. Two loads of silage are hauled from the trench silo each day in a spreader. Protein and corn are added to the load and the spreader gradually unloads into the auger hopper and the mixed ration is fed out. L. F. Photo

● New Agr. Div.

(Continued from Page 1)

One major field of study, food technology, will be taken by all students in the program. The food technology major includes all manufactured food commodities, milk, meat, fruits, and vegetables.

"After meeting the requirements of a basic core of science and technology courses," states Josephson, "students will be able to specialize in their particular fields of interest."

There are career opportunities throughout the foods industries, he says, from the supervision and control of quality in food manufacturing to the management of food businesses. Persons with advanced training are in demand in research and development positions, and in top management, he adds. A strong demand also exists for food technologists in government food regulatory agencies and with chemical companies, packaging firms, and other allied industries.

Head of the department of dairy science since 1948, Josephson received the Borden Award in chemistry in 1954, as sponsored by the American Chemical Society, for outstanding research achievements in the chemistry of milk.

● Now Is The Time

(Continued from Page 4)

th will be encouraged and the weeds will not have a chance to go to seed After heavy grazing on an area, the clipping practice is recommended to get more uniform aftermath growth Good pasture management requires regular clipping during the grazing season.

In total value, soybeans currently stand third among U.S. cash crops — outranked only by cotton and corn.

● Angus Breeder

(Continued from Page 1)

For example, at the time of our visit to the farm last week, they were testing a mechanized shepherd gate to be used to bring cows into a milking parlor It involved a car tire and wheel mounted on a steel frame which was clamped to a section of steel gate. The wheel was powered by an electric, 1720 r p m. motor which was geared down to permit the tire to make one revolution per minute when mounted at the end of the gate The speed can be increased by moving the wheel and motor mount toward the inside of the gate, Frey said. This unit, tailored to a customer's exact specifications, passed its final test and was considered ready-to-go, thus adding one more product to the growing line of Frey-built equipment.

For most of the past fifteen years, or so, Fred's main interest has been farming the family's 500 acres, and breeding and showing Angus cattle Somehow, he has managed to continue those full-time activities while adding this new one, the custom steel gate business.

In the show ring this year Fred had the champion steer at the Eastern States Exposition, the reserve champion Angus at Denver, Colo., and first in group of three steers at the International Show at Chicago. He also hit the three-show southwest circuit this year in Texas, scoring champion Angus at Houston.

On the home farm, Frey raises 200 acres of corn, plus altalta. Most of the balance of the land is used to pasture some 300 head of cattle. In addition to his 60 brood cows, he feeds out several hundred head of steers, and raises heifers and young bulls for sale.

One new product of which Frey is very proud is his "Slam-o-Matic" latch which is made in double o single models. The double latch has

A LETTER FROM THOMAS EHRGOOD ... to the farm families of the 16th District

#2
ON THE
BALLOT
Lever 13-A

"As you know, I served the Lancaster-Lebanon areas for 8 years in the Pennsylvania State Senate; During those years I supported the rights of the individual and opposed those leaders in the Senate who were attempting to strangle individual initiative. As you may recall, Senator Snyder joined me in the effort opposing power politics in the State Senate.

As an owner and operator of a 174-acre farm in Lebanon County, and as a practicing lawyer, I recognize the problems of the farmer in showing a profit at the end of the year. The rise in operational expenses, taxes, cost of food — which you must purchase the same as everyone else — has placed a great squeeze on the American farmer.

DURING MY SERVICE IN THE PENNSYLVANIA SENATE I SUPPORTED THE ARGICULTURAL EXEMPTION OF THE SALES TAX AND WAS A MEMBER OF THE TASK FORCE WHICH ENACTED A NEW EMINENT DOMAIN LAW WHICH HELPS PROPERTY OWNERS GET A PROMPT AND FAIR PAYMENT FOR LAND TAKEN AWAY BY THE STATE.

In the Congress of the United States I would disapprove of any bills which attempt to make a uniform sales tax throughout the United States, without an agricultural exemption and the manufacturing exemption, as well as any proposed bills which would cut down on agricultural research funds for Penn State University.

I WOULD SUPPORT LEGISLATION TO PROHIBIT THE USE OF POISONOUS SPRAYS BY THE STATE HIGHWAY DEPARTMENT WHICH IS SO DAMAGING TO OUR CROPS.

I sincerely solicit your help — and your vote — on May 17th for the Congress of the United States, 16th District."

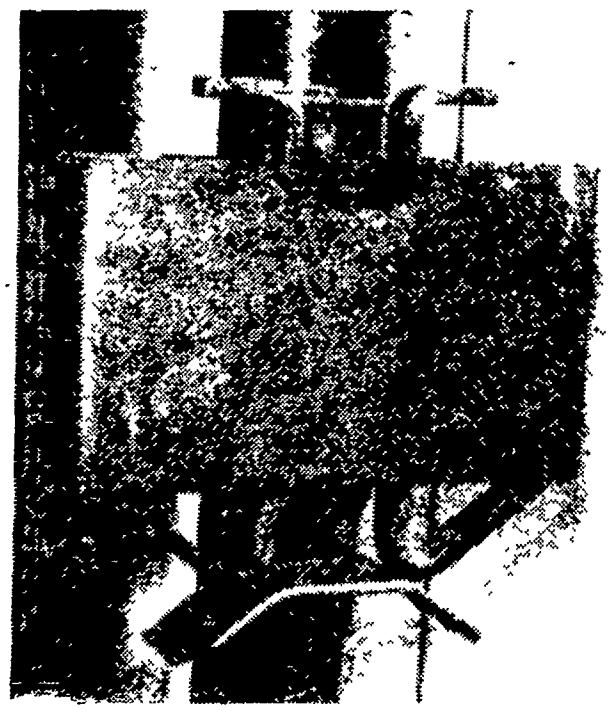
ON MAY 17th VOTE FOR:

THOMAS A. EHRGOOD

REPUBLICAN CANDIDATE FOR CONGRESS, 16th DISTRICT

FRED FREY demonstrates how his salt and mineral feeder, with its "fin" guided by the wind direction, keeps the metal back in a position protecting the feeder's contents. His shop makes all parts of this feeder except the rubber pans which hold the material. L. F. Photo

ERNIE FREY shows how Frey Fence Panels are assembled with each joint welded in the farm shop. Although these panels are made in certain standard sizes, custom sizes are built on request. L. F. Photo



THIS PATENTED LATCH, which Fred Frey calls the "Double Slam-o-Matic", was designed and tested on the farm It is designed to permit gates to be opened clear through from either side, but it can not be readily opened by livestock. L. F. Photo

● Angus Breeder

(Continued from Page 8)

the advantage of allowing a gate to swing clear through in either direction.

All of Frey's gates and fencing are made from lightweight, tubular steel, each receiving a prime coat of paint before it leaves the shop A new tank has recently been ordered, Frey said, which will provide a complete paint dipping system, handling gates up to 20-foot in length.

At the moment, Fred and Ernie make all the products, with one part-time man helping out But the way business is expanding, Fred foresees a day in the not-too-distant future when his little farm shop will not adequately handle the traffic, and a large modern machine shop will be needed

In addition to his farming, showing, and other business activities, Fred found time to help organize a branch of the National Farmers Union in southern Lancaster and Chester Counties a couple of years ago. He also served one term as that organization's first president.

AS MOMMA watches the camera suspiciously, the newest arrival at Twin Oaks seems to have only thoughts of food on his young mind. The Frey brood cow herd remains on pasture the year-round, and all the calves are dropped in the great out-doors. An old barn nearby is available for shelter in the worst weather. L. F. Photo

4-H Club News

GARDEN SPOT 4-H CLUB HOLDS REORGANIZATION

by Nancy Risser, reporter

The reorganization meeting of the Garden Spot 4-H Community Club was held May 10 at the Smoketown Elementary School The following officers were elected

Kenneth Risser Leola R1 president Claire Esbenshade Willow Street, vice-president, Debbie Trout Bird-in-Hand secretary Tom Houser Lampeter, treasurer, Tom Forry 2016 Horseshoe Road song leader Dean Brubaker, Willow Street game leader and Nancy Risser Leola R1 news reporter Bill Houser Lampeter was elected as the club's County Council representative

Harvey Gipe, assistant county agent showed slides of his trip to Holland as an I F Y E Leaders of the club are Wilbur Houser and Maurice Herr

A committee was appointed to set up a booth for the Spring Jamboree which will be held at the Leola War Memorial Building on May 27.

The next club meeting date was set for June 14.

Before you plant any Hybrid Seed Corn...

talk to us about ISOTOX 25 Seed Treater (F)

Good hybrid seed corn is expensive, so it doesn't make sense to plant it without protecting it from insects and soil disease.

That's why we're telling our customers to use ISOTOX 25 Seed Treater (F). You mix it with the seed right in the planter box, and your corn seed goes into the soil with all-round protection. That's because ISOTOX is an insecticide and a fungicide. It works on insects like wireworms, seed corn maggots and seed corn beetles, and keeps off dry rot and damp-off.

ISOTOX is made for hybrids, and it's made so the right amount sticks on every seed. It runs just about 16c an acre to use this seed treater so why take a chance on losing any expensive seed, or having to replant later. See us for ISOTOX Seed Treater (F) now.

SECOND SECTION

Local Breeders To Attend The National Holstein Convention

Twelve area Holstein breeders will be among the more than 1000 persons attending the 81st annual convention of the Holstein-Friesian Association of America at Wichita, Kansas, May 30 to June 2. They will include Robert, Elvin, Jr., and Richard Hess, all of Strasburg R1; J. Mowery Frey, Jr. and Mrs. Herbert Royer, both of Lancaster; Robert Groff, Quarryville; Robert Kauffman, Elizabethtown; David Yoder, mgr. ABC, Lancaster; Gideon Stoltzfus and John Umble, both of Atglen; Andrew Stoltzfus, Elverson; and Harvey Stoltzfus, Morgantown. The group will leave from Baltimore by plane on Memorial Day, returning on June 2.

Holstein-Friesian Association of Kansas is the hosting organization and will make program arrangements for the week's activities. Co-chairmen for the national meeting of registered Holstein cattle breeders are Kurtiss Forsberg and Ivan Strickler, a member of the Holstein Association's board.

Program highlights include a Black and White show, open forum and business meeting and the national convention sale on Thursday of that week. Board and committee sessions will precede the convention agenda.

Speakers named for appearances before the convention include Glenn Lake, president of National Milk producers Federation; William F. May, vice president of the Federal Land Bank of Wichita, and Eugene C. Meyer, associate editor of "Hoard's Dairyman" magazine.

Talks will also be given by Fred M. Lege III of Foreign Agricultural Service, Dr. Ralph Hodgson, director of the livestock division of Agricultural Research Service, and Craig Beane, president of National DHIA.

A report of the Holstein Association's business will be made by Executive Secretary Robert H. Rumler. Director William L. Conyngham of Pennsylvania will give a Finance Committee report. Recognitions of the Holstein Junior Champion boy and girl and the top lifetime milk producer, College Ormsby Burke (EX-GM) will also be conducted.

Bauermann To Join NEPPCO School Faculty

Three new names have been added to the faculty of NEPPCO's 1966 Egg Marketing School scheduled for June 12th thru 15th at Rutgers University, New Brunswick, N. J.

Professor Julius F Bauermann, Extension Food Technologist at Penn State, who is widely known for his work in quality control, product

Lancaster Horse Show Set For May 20-22

The annual Lancaster Horse Show, scheduled for May 20, 21 and 22, will be held at the Lancaster County Riding and Tennis Club grounds, Lincoln Highway West, Lancaster, according to show co-chairmen Miss Peggy Steinman, Robert Brandt, and Chris McMurtrie.

Divisions scheduled this year include saddle horse; roadster, Tennessee Walking horse, western pleasure horse; quarter horse, hunter; jumper, junior exhibitor, saddle seat equitation, and the NCHA championship cutting horse contest

Two members of the Flying Dutchman Parachute Club will sky-dive from an altitude of 12,000 feet. They will open their chutes at 2,500 feet and land in one show ring A baking contest and games for the children will also be featured

The Lancaster Horse Show is being co-sponsored this year by the Lancaster Junior Chamber of Commerce and the Lancaster County Riding and Tennis Club. Proceeds will benefit a number of non-profit community projects, the show chairmen reported

Economists figure that by 1970 total demand (both domestic and foreign) is likely to require an annual U.S. soybean crop of more than a billion bushels

For the Farm Wife and Family

By Mrs. Richard C. Spence, Food Editor

RICE: Main Dish Or Dessert

SPENCE

For most Americans rice is not the key to survival but part of our heritage of plenty and multiple choices for breakfast, lunch and dinner. Popular forms of rice on the grocery shelf include white milled rice, parboiled, precooked rice and rice seasoned with spices and herbs.

Enriched rice must have thiamin, niacin and iron added To avoid wasting nutrients do not wash rice before or after cooking Use rice often in your menus, both as a main dish or as a dessert.

* * * *

ONION RICE

1 cup chopped onion
2 tablespoons butter or margarine
1 cup uncooked rice
2 cups beef bouillon
1 teaspoon salt

Saute onions in butter until tender Add remaining ingredients Bring to a boil stir once cover, reduce the heat and simmer 15 minutes or until rice is tender Fluff rice with a fork

HAM WITH ORANGE CURRIED RICE

2 cups cooked ham, cubed
3 tablespoons chopped green pepper
2 tablespoons chopped onion
2 tablespoons butter or margarine
2 tablespoons packed brown sugar
¼ teaspoon curry powder
½ cup orange juice
1 teaspoon grated orange peel
2 cups cooked rice

Pantry green pepper and onion in butter for 5 minutes Add ham and brown sugar Stir and continue cooking 5 minutes Add remaining ingredients Mix well Cover and cook over very low heat for 15 minutes or until liquid is absorbed

* * *

GREEN GODDESS RICE

3 chicken bouillon cubes
2 cups boiling water
1 clove garlic crushed
½ teaspoon salt
1 cup brown rice
1 cup yogurt
¼ cup chopped green onion
¼ cup chopped parsley
⅛ teaspoon pepper

Dissolve bouillon cubes in boiling water Add garlic and salt Combine with rice in a 1½ quart casserole Cover and bake in a slow oven, (325 degrees) 45 to 50 minutes or until liquid is absorbed Combine remaining ingredients Spoon sauce over rice Makes 6 servings.

* * *

CHICKEN-AVOCADO RICE SALAD

4 teaspoons lemon juice
1½ cups diced avocado
1 cup chicken cooked, diced
1 cup cooked rice
½ cup finely chopped celery
½ teaspoon finely chopped onion
2 tablespoons mayonnaise
2 tablespoons sour cream
1 teaspoon salt
Lettuce leaves

Pour lemon juice over avocado Combine remaining ingredients except lettuce Mix well Add avocado mixture and toss lightly Chill Serve on crisp lettuce Makes 6 servings.

* * * *

RASPBERRY RICE A L' AMANDE

1 cup uncooked rice
2 cups water
1 teaspoon salt
¼ cup sugar
1 teaspoon vanilla
½ pint heavy cream, whipped (1 cup)
¼ cup sliced almonds
2 packages (10 ounces each) frozen raspberries, thawed

Combine rice, water, salt and 2 tablespoons sugar. Bring to a boil, stir once, cover. Reduce heat and simmer 14 minutes, or until tender. Remove from heat; stir in vanilla. Cool. Add remaining 2 tablespoons sugar to the whipped cream. Fold whipped cream and almonds into cooled rice Alternate rice mixture and raspberries in serving bowl, or serve in individual serving dishes. 6 to 8 servings.

NOTE Instead of raspberries use strawberries, loganberries, blueberries, frozen or fresh or your favorite fresh fruit in season

RICE CUSTARD

2 cups milk
1 cup cooked rice
1 tablespoon butter or margarine
⅓ cup sugar
¼ teaspoon salt
½ cup raisins or nuts
2 eggs, beaten

Heat milk, add rice, and butter or margarine Add sugar, salt, and raisins or nuts to eggs, then slowly stir in the hot milk mixture Pour into greased baking dish, set in pan of hot water Bake at 350 degrees 1 hour, or until set. Makes 4 servings.

VARIATION: For raisins or nuts substitute chopped dates, figs or prunes. The cooking time can be shortened to 30 minutes by using individual custard cups. For an extra flourish garnish with a red or green cherry.

* * * *

RICE DESSERT WITH SWEET CREAM SAUCE

1 cup uncooked rice
2 cups water
1 teaspoon salt
2 cups milk
2 teaspoons butter or margarine
½ cup sugar
1 tablespoon unflavored gelatin
1 teaspoon vanilla
½ pint heavy cream, whipped

Combine rice, water and salt, Bring to a boil, stir, cover, reduce the heat and simmer 10 minutes. Add milk, butter and sugar, continue cooking until thick and creamy, stirring occasionally. Soften gelatin in ¼ cup water. Stir into rice mixture. Cool. Fold in vanilla and whipped cream. Spoon into a 6 cup ring mold. Chill until firm. Unmold and garnish with fruits such as mandarin oranges, bananas, grapes, melon balls. Serve with Sweet Cream Sauce*.

***SWEET CREAM SAUCE**

2 eggs, separated
3 tablespoons sugar
½ teaspoon vanilla
½ cup heavy cream, whipped

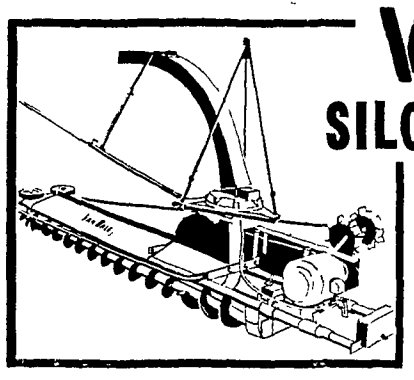
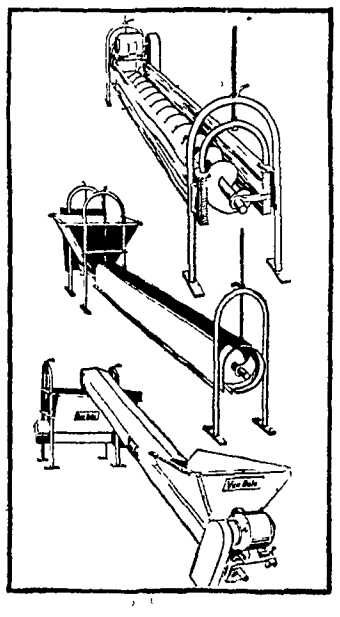
Complete automatic feeding for DAIRY COWS and CATTLE!
VanDale SILO UNLOADERS



Double augers deliver more silage per minute even when silage is deeply frozen . . and at a lower operating cost Patented V-paddle impellers *throw* . not blow . . . silage down chute Adjustable drive hubs give positive traction in all types of silage

Three-point suspension keeps unloader level at all times.

Plus a complete line of bunk feeders to meet your exact needs



Straight-out Auger Feeder
With VanDale units you can custom build the bunk feeding set-up to fit your needs. Drive section includes hopper, drive assembly and 10', high capacity 9" auger. Additional auger sections are in 10' units and are easily coupled.

Feed-R-Flo Bunk Feeder
The new, all-metal complete feeder. High capacity 9" auger rotates within tube. Gives all-weather protection, even feed distribution, and lower operating cost.

Conveyor Trough
An important link in automatic feeding. Positioned below silo chute, the VanDale conveyor trough carries the silage to the bunk feeder. Primary section includes hopper, drive assembly, and 10', 9" auger. Additional 10' auger sections may be added.

Farm Women Hold Mother's Day Meeting

Farm Women's Society No. 14 entertained Society No. 24 at a Mother's Day meeting. After a tour through WGAL-TV a short business meeting was conducted with Mrs. Lloyd H. Ranck, president, in charge.

Society No. 15 will entertain Society No. 14 at Black Rock June 16 at 1:30 p.m. A bake and food sale will be held Saturday, May 21 at Arlan's at the Manor Shopping Center.

Geraniums were presented to the oldest mother present who was Mrs. Alice Shaubach, Strasburg. She is 86 years old. The youngest mother was Mrs. Judith Bomberger, New Holland, a guest member of Society No. 24. Mother with the most children was Mrs. Jean Thomas, Willow Street. The mother with a child the furthest away from home was Mrs. Elma Barge, Strasburg, who has a son in Colorado.

Hostesses for the meeting were Mrs. Jacob Herr, Mrs. Everett Newswanger, Mrs William Dean, and Mrs. Charles Leaman.

The June 8th meeting will be held at the Agway Store, Lancaster, at 1:30 p.m. with P.P.& L. Home Economist demonstrating electrical appliances. The hostesses for this meeting will be Mrs. Leon Thomas, Mrs. Warren Hershey, Mrs. Vincent Hershey and Mrs. Eva Esbenshade.

THOMAS

Some Tips For Choosing Handbags

When you shop for a handbag, check it for good workmanship. Ask yourself how convenient the bag is.

See that the opening is large enough and convenient to use. Look at the lining. It should be strong enough to withstand constant rubbing The mountings and fittings should be strong

See if there are extra compartments You may appreciate having them.

After you buy your handbag, give it good care and it will stay new looking for several seasons.

REMEMBER to use the ventilating fan in your kitchen when you're doing any top-of-the range cooking A fry price themselves off the market Or the competition is too keen and distribution is poor pan, the oven, or almost any cooking utensil generates odors and some moisture that the fan will remove quickly Turn on the fan while you're washing dishes to remove moisture A ventilating fan will do a better job if you turn it on while moisture is building up instead of trying to clear moisture out of a room all at one time

DID YOU KNOW that for every new food that hits the market two more never see your grocer's shelf? Only 500 of those you do see each year survive until the next. Why? A United States Department of Agriculture study of convenience foods in four cities in the United States shows new products often

Some Guidelines For Appliance Servicing

To help you keep the cost of servicing home appliances to a minimum:

—Follow directions for use and care of your new appliance

—Insist on a good installation making sure the appliance is level and operating perfectly

—Carefully file important records, such as bill of sale, warranty, servicing contracts, and the name and address of the serviceman

—Keep receipts for service charges for future reference.

EFFICIENCY REPORT FOR CATTLE FEEDERS:

15% more daily gain 9% less feed

with Ful-O-Pep Super Cattle-izer Beef Supplement

Latest Research Farm tests compared new Ful-O-Pep Super Cattle-izer Beef Supplement with a control feed alike in every respect—protein, vitamins, minerals, antibiotics, stilbestrol—except for the new concept principle—Cattle-izer.

Result—increased performance, all the way, with Ful-O-Pep Cattle-izer.

Cattle-izer fed cattle averaged 2.9 lbs. daily gain over the 177 day feeding period—15.5% higher than the control—on 9.1% less feed per cwt. gain. Lower feed cost per cwt. gain too, plus higher carcass grade and better yield.

See what Ful-O-Pep Cattle-izer can do for your net return!

Unwilted Legume For Cattle Feed Studied

Recent Agriculture Research Service trials suggest that unwilted legume silage would be a good cattle feed —if a substitute for wilting could be found to make the silage more palatable.

Dairymen know cattle do poorly on unwilted legume silage because they won't eat nearly as much of it as of other feeds, ARS says. However, if a farmer didn't have to wilt his forage after mowing he'd save time and eliminate the risk of damage from rain.

Dairy cattle nutritionist D. R. Waldo found in tests at Beltsville, Md., that cattle got as much nutrition per pound of dry matter from unwilted silage as they did from field-cured hay. He eliminated through research the possibility that slower passage of feed through the digestive tract causes cattle to eat less unwilted silage. He concluded that this lower consumption must be because unwilted silage isn't palatable.

But why is it less palatable? Is it because of the formation of amines and aldehydes — chemicals sometimes found as byproducts of unwilted silage—during fermentation in the silo? Research at other stations suggests this possibility, but it hasn't established whether the formation of these chemicals is the only, or even the main reason for the low palatability of unwilted silage.

So far, attempts to prevent these chemical byproducts, from forming by mixing additives with silage at the time of ensiling haven't been successful. Scientists think, however, that the use of additives may yield good results eventually. This approach is being followed by ARS and in other research in all major silage producing countries

Waldo's trials followed work done several years ago by ARS nutritionists J W. Thomas Thomas ran tests with unwilted silage and disproved the possibility that its bulk, caused by its high water content, might make it difficult for cattle to consume it in large enough quantities He soaked hay in water until it was as wet as unwilted silage, then compared the intake of the two feeds. Cattle ate the wet hay more readily than the silage, showing that high water content itself was not responsible for the low intake of the silage.

For his own comparisons, Waldo used two groups of heifers. Heifers in one group were fed good quality legume forage put into a silo without wilting Those in the other group received hay cut from the same field Thus, the nutritionist was able to compare digestion of high moisture forage to that of forage from which most of the moisture had been removed

Waldo completely emptied the rumens of heifers fed the two rations and calculated the gross wet and dry weight of the contents He found the rumen load of silage-fed heifers considerably lighter, showing that they were not overstraining the capacities of their rumens. Other data showed that heifers on silage drank less water, partially compensating for the high water content of their feed

This finding still left the possibility that digestion of silage is inefficient and that it stays in the rumen longer, slowing the overall progress of feed through the animal. No such slowdown proved to exist. When he measured the flow of feed into the rumen against the level of feed remaining there, Waldo found that silage passed through the rumen as fast as hay, or faster

Next, he checked the possibility that digestion might be less complete because fermentation in the silo had altered the digestibility of the silage.

The effect of silo fermentation proved to be measurable, but only for one fiber— hemicellulose Since hemicellulose forms only a small percentage of legume forage, the net effect on digestibility is small.

Then, Waldo looked beyond the rumen, where the capacity of the digestive tract is much lower His research showed that heifers on hay passed more feces per day than those on silage, indicating that the digestive tract of silage-fed heifers must be unrestricted — fact, used below capacity.

Waldo found that energy furnished per pound of dry matter was the same for both forms of feed: Nitrogen derived from silage was slightly less per pound of feed, but enough to support a good growth rate.

Management Ability Seen Biggest Single Factor In Farmer's Success

The ability to manage is more important in determining a farmer's success than the size of his farm or quality of land or type of enterprise, according to W. T. McAllister, farm management specialist at the University of Delaware "There is little doubt about the fact that the real difference between the successful and the marginal businessman — be it farmer

for positive disease control on potatoes, tomatoes and other vegetables

You're always *right*
when you rely on Du Pont "Manzate" D because it:

- ☐ Gives positive protection against a wide range of diseases.
- ☐ Protects crops through rainy and humid infection periods.
- ☐ May be used with many of the commonly-used pesticides.
- ☐ Won't damage plants when applied at short intervals according to directions.
- ☐ Won't clog spray nozzles or corrode equipment.
- ☐ Has small particles which make better contact with disease organisms.
- ☐ Readily mixes with water...an easy to use wettable powder.

Be right always Order your supply of Du Pont "Manzate" D from your local dealer today, or for more information write:
Du Pont, Industrial and Biochemicals Dept , Room N-2439, Wilmington, Delaware 19898.

Farm Women #1 Fete Daughters At Banquet

Mrs. John Bomberger of Elm, spoke on the topic "Mother" at the Mother and Daughter banquet held by the Society of Farm Women 1 at the Brunnerville Fire Hall.

Entertainment also included a violin solo by Virginia Brubaker accompanied by Debbie Wenger, an instrumental duet by Debbie and Cynthia Hess accompanied by Mrs. J. Robert Hess, a recitation by Kim Hess and a reading given by Mrs. Scott Garman. Several games were also played with Mrs. Clayton Royer in charge.

Mrs. Clayton Sangrey, president, conducted the business meeting. Mrs. Franklin Weber gave the invocation and Mrs. Henry Shreiner led the devotions. Mrs. Roy Brubaker was in charge of group singing. Roll call included the introduction of guests.

Special guests attending the banquet were Donna Garrity and her mother, Mrs. Sarah Garrity, 28 E. Lincoln Ave. and Herbert Snavely and his parents, Mr. and Mrs. J. Warren Snavely, Lititz R4.

Donna and Herbert received recognition for being the outstanding Home Ec and Agricultural seniors at Warwick High. They will be presented a certificate and an award at Commencement.

Choose Project

Mrs. Sangrey announced that the Farm Home Foundation has been chosen as a county project. Societies 1 and 10 will provide cups, plates, napkins and spoons for the USO entertainment at the Moose Hall May 14.

Plans were discussed concerning a 50th anniversary banquet to be held some time this year in honor of the past presidents

Ideas are to be submitted at the next meeting for ways of conducting the Family picnic to be held at Long Park August 12.

The Society of Farm Women will meet next at the home of Mrs. Franklin Weber with Mrs. David Reinard as cohostess. Mrs. Virginia Dulabohn is the guest speaker. She will demonstrate flower arranging.

Society members are planning a trip to Sterling Forest Gardens, N.Y., on May 14.

A meeting of State Farm Women was held recently at Dillsburg. Six members of Society 1 attended.

A Spring Homemakers meeting sponsored by the Agricultural Extension Service was attended by several members at the Meadow Hills Dining Room, New Danville.

Have You Heard?

On-The-Shelf Storage For Foods

You can store some foods at room temperature in kitchen cabinets or in the basement. Such on-the-shelf foods have a relatively long storage life. But most foods stored on the shelf should be tightly sealed and kept in a dry place away from light and heat.

Foods you can keep satisfactorily on the shelf include: Unopened canned foods, unless otherwise indicated on the label. Dried foods, such as vegetables and fruits. Prepared mixes, puddings, gelatin, spices, and seasonings. Grain products including breakfast cereals, rice, macaroni products, and flour. Fats and oils except butter, margarine, and lard.

Low-cost baler with big-baler benefits

John Deere 24-T Twine-Tie Baler

If you are on a family-sized farm, a John Deere 24-T Twine Tie Baler is the practical baler for you. It's a low cost baler with big baler benefits. For example, 24-T has all the capacity you'll ever need. Bales are neat, square-cornered, and tied to stay tied. Bale size is 14x18. Many safety devices protect the 24-T from damage. A jackstand is regular equipment. The long hitch gives you excellent maneuverability and better visibility of the pickup. It's a light-running baler, requiring a 2-plow tractor for most conditions. Come in and get the full story on the John Deere 24-T Baler. The Credit Plan makes it easy to own machines in *The Long Green Line.*

development, and distribution practices will be this year's lecturer on egg plant sanitation. Bauermann is a Rutgers graduate and has been on the Penn State staff since 1959.

Dr. Kenneth Wing of Cornell University will cover the long-range impact of New York Mercantile Exchange trading on egg prices. Wing has just completed an exhaustive study of this aspect of egg marketing, so attendees at the NEPPCO school will be among the very first to hear the results of his work.

Gerald J. Karadbil is the third new faculty member. Karadbil is Director of the Egg Division of the Wakefern Corp., the wholesale buying arm of the Shop-Rite Chain Stores. At one time or another in his long career, Karadbil has been involved in every phase of the egg industry from production through retail sales.

These three new members will join six other well-known industry names in completing the school faculty. The others, who have served in previous years, are: Dr. L. B. Darrah of Cornell University; Dr. Robert Bentz of the University of Illinois; Mr. L. S. Heemstra, General Manager of Federated Egg and Poultry Sales, Cleveland, Ohio; and Messrs. Max Kirkland and Alan Meredith of the Rutgers University Staff.

NEPPCO School Director David Hefler has also said that 1966 registrations are expected to run substantially ahead of any previous year. "We expect that this will be the biggest class in our history," said Hefler, "so I want to urge anyone who has not already contacted us to do so immediately. We want to be able to accommodate all applicants, and not be forced to turn people away at the last minute." Interested poultrymen may reach Hefler in care of the NEPPCO office, 10 Rutgers Place, Trenton, New Jersey, 08618.

We chose electric heat because we are retired

With flameless electric heat in our home, we can just relax. It's so convenient and carefree. There's no fuel storage or delivery to worry about, no maintenance necessary, and no noise. And there is less cleaning, which is always nice for a retired couple like ourselves.

We enjoy electric heat's low cost, too. And—there aren't any worries about costly repairs, service contracts, or about being uncomfortable. Electric heat is really wonderful.

We recommend you go electric, too. IF YOU ARE BUILDING — Tell your builder you want to be modern, you want the best, you want electric heat. IF YOU ARE REMODELING — Call a Reddy Kilowatt Recommended Electric Home Heating Dealer for an estimate. He is listed in the Yellow Pages under "Heating Contractors."

"Greenspan" Aid Available Here

Lancaster borough or township governments could qualify for a Greenspan grant of money to help buy cropland for a park or other public use, Fred G. Seldomridge, chairman, Agricultural Stabilization and Conservation County Committee, pointed out this week. Any other city or county government — or the state — could likewise qualify, Seldomridge reported.

Greenspan — so called because of its potential for making green space available to urban residents — is a new way to take cropland out of agricultural production and convert it to open space, public recreation, wildlife habitat, natural beauty, or uses that control air or water pollution.

It is a part of the new Cropland Adjustment Program, authorized by legislation enacted by the Congress last year, under which farmers shift acres out of certain crops while retaining title to the land. Communities buying cropland may receive financial help under the program similar to that farmers receive under long-term CAP agreements.

Under Greenspan, the Secretary of Agriculture may transfer funds to any state or local government in amounts figured at the same rate as would have been used had the land remained in the hands of the farmer, and not exceeding 50 percent of the cost of the land. Since conservation is an important goal of Greenspan, assistance is also available to help install needed conservation practices on such land in much the same way as the cost-sharing available on private farm lands.

Projects for which Greenspan may provide financial assistance include parks, playgrounds, camping or picnic areas, public hunting or fishing, protection of a scenic area, a "green belt" to control sprawl or protect zoning, or reservoir pollution control.

New Committee Opposes Federal Hide Export Cut

Formation of a Committee on Hides to work with industry groups and governmental agencies on problems regarding the production and distribution of cattle hides, calf and kid skins and bovine leathers was announced recently by Herrell DeGraff, American Meat Institute president.

The Committee is headed by Dean M. Clute, of Swift & Company, Chicago.

At its initial meeting, the Committee reiterated industry opposition to federal restrictions on hide exports, pointing out that current quotas on exports have cut back hide prices equivalent to $3 per head for 1,200 pound native steers.

The U. S. Department of Commerce has under advisement requests from livestock and meat organizations asking that the export restrictions be withdrawn

The Jamesway Volumatic distributes evenly from top to bottom. No feed separation.

BIG J DISTRIBUTOR/UNLOADER
distributes feed uniformly— gives you 20% more capacity

Two machines in one! The Big J works in any season — as a silage distributor, as a silo unloader. At filling time, the Fill-O-Matic distributor revolves to direct feed to the wall of the silo — cob, corn, stalk, grass and leaf particles stay mixed evenly for ideal compaction, fermentation and preservation. No uneven, off-center loading which causes dangerous pressures against silo wall. Ends hand labor in the silo because the Big J is completely mechanical!

Positive delivery unloader! The Big J unloads evenly, too, with Power Circle Drive and 3-Point Suspension. You can remove fluffy, newly cut haylage immediately — no waiting for feed to settle.

AFBF Leader Warns Of Labor Shortage; Urges Government Ease Foreign Worker Rules

The prospect of the shortest supply of seasonal farm labor in many years is the most difficult problem facing fruit and vegetable growers, Charles B. Shuman, president of the nation's largest farm organization, the American Farm Bureau Federation, said recently.

"With the unemployment rate down to 3.7 percent, there simply is not enough slack in the available labor force to meet the seasonal farm labor demand. We, as farmers, are happy about the new low in the unemployment rate, but at the same time we must face the fact that this reduces the availability of workers to harvest fruit and vegetable crops," Shuman said.

Shuman made the statement in announcing the appointment of a special National Farm Labor Committee to study a problem which, he said, promises to be most serious for both consumers and farmers.

Shuman declared that Secretary Wirtz in the past has granted only minimum and last-minute relief for farmers caught in emergency labor shortage situations.

"As a general rule," Shuman said, "the actions of the Secretary has been too little and too late. Heavy crop losses were the result in 1965. Agriculture, particularly the fruit and vegetable industry with its many complexities and risk-taking, needs assurance that emergency situations will be met with prompt and adequate action.

"In 1965, substantial losses were experienced by producers of strawberries, tomatoes, and asparagus in California and cucumbers in Michigan. This pattern will become much more serious if the Administration does not develop a program upon which farmers and others involved can rely."

Shuman said the present farm work force of 800,000 will have to be tripled by June to 2.4 million workers to meet demand.

The Farm Bureau president said farmers are mechanizing rapidly in the face of the labor shortage, but that mechanization still is some distance off for some crops. As an example of heightened mechanization, he said it is expected that 80 percent of the California canning tomato crop will be picked by machines this year, as against 29 percent mechanically harvested last year.

"The fact is," he concluded, "many fruit and vegetable farmers will be desperate for help unless the Administration indicates more clearly than they have yet done that the employment of foreign workers will be permitted to meet crucial farm labor emergencies."

Our Next Congressman:

ED ESHLEMAN

Experience serving you

★ 12 years of experience in Harrisburg making thousands of lawmaking decisions.

★ Voted on 1,400 roll calls last year.

★ Elected assistant floor leader of the Republican delegation—1964—1965—1966 in General Assembly.

★ A key member of Governor Scranton's legislative leadership team participating in weekly strategy meetings.

★ Sponsor of 173 bills in fields of education, welfare, police protection, transportation, and local government.

Vigorous and youthful

★ 45 years of age—young enough to offer the 16th Congressional District voters many years of dedicated service.

★ Health—excellent.

Popular choice

★ Endorsed as best qualified by your present Congressman, Paul B. Dague.

★ Selected as the best man for Congress by a great majority of your Republican committeemen and women, whom you elected.

Vote for a knowledgeable, experienced lawmaker, ready to assume leadership in the national scene.

Vote for the top man on the ticket—the number one spot on the REPUBLICAN ballot—

DeWitt Brothers, Richard, (left) and Jack, provide the footwork for breaking ground at the site of the new Big Dutchman, Inc. building Richard is president of the firm and Jack is board chairman.

Big Dutchman Breaks Ground For New Bldg.

Big Dutchman, Inc, of Zeeland, Michigan, has broken ground for a new plant and office complex, 300 ft. wide and 434 ft. long Jack DeWitt, Chairman of the Board and Richard A. DeWitt, President, announced the building plans at a ceremony at the site.

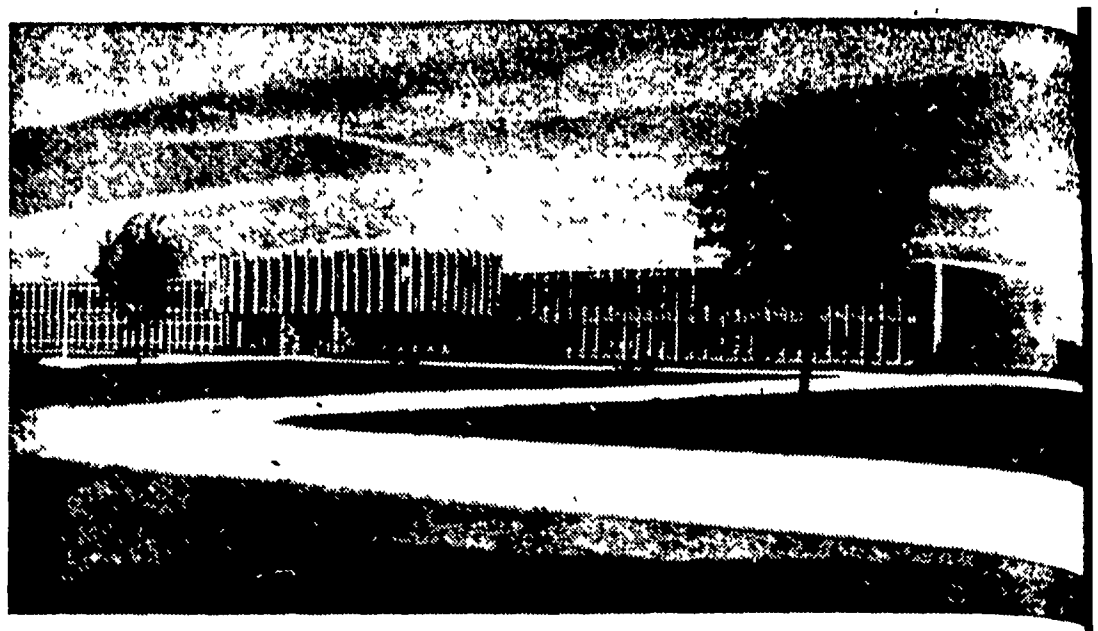
Flags marked the corners of the new building, located directly north of the company's existing headquarters. The DeWitt brothers jointly removed the first shovelful of dirt in the presence of local officials and the company's entire personnel. Both brothers gave brief talks, outlining the company's growth and expansion plans, in the United States and overseas

The new building will consist of three adjoining areas, to be developed according to schedule: a production and assembly area of 53,200 sq ft for the company's line of automatic equipment for the poultry and livestock industry, an additional 62,000 sq ft for warehousing and marshalling the vast amounts of component parts required; and a two-story office building of 300 x 50 ft, featuring an attractive front of glass, brick and anodized aluminum The plant area will be divided in five 60-ft bays, with structural steel framing and colored steel outside panels Ribbon windows will provide ample light and ventilation

The new facility will enable Big Dutchman, Inc, to consolidate and expand under one roof all of its production, warehousing and shipping facilities now scattered in four separate buildings in the Holland-Zeeland area Ten fully enclosed shipping and receiving docks will allow a much more efficient handling of shipments going out to 30 domestic branches in the USA and to subsidiaries and customers all over the world.

Big Dutchman, Inc, is a world-wide organization engaged in the production and marketing of equipment systems for the poultry and livestock industries. The Pennsylvania branch of Big Dutchman is located in New Holland.

Good seed should not only have high germination percentage, but should have good appearance, be plump, with good test weight, be free of damage and disease to produce a good stand of healthy seedlings.



ARTIST'S SKETCH of the new Big Dutchman, Inc. complex which is presently under construction at Zeeland, Michigan.

Hunting Licenses, A $5-Million Business For Game Comm. In '65

Pennsylvania again led the nation both in the sale of resident hunting licenses and in total income from the sale of hunting licenses in 1965, according to the U. S. Fish and Wildlife Service.

Last year there were 917,824 paid hunting license holders in the state, an increase of 55,221 over the previous year. The Pennsylvania Game Commission's total revenue from the sale of licenses, tags, permits and stamps was $5,994,450 50, an increase of $539,964.60 over 1964.

Out-of-state hunters also demonstrated that Pennsylvania is a favorite destination when crossing state borders to hunt. Last year the Game Commission sold 52,546 non-resident hunting licenses, tags and permits to out-of-state hunters. This figure placed the state among the nation's leaders in attracting non-resident hunters.

The federal report showed that Michigan had 893,809 paid hunting license holders last year to rank second in the nation, while New York was third with 726,561 and California was fourth with 685,157.

Pennsylvania's lead over Michigan in resident licenses sold was 20,000 in 1964 and 24,000 in 1965. The Keystone State's lead over New York increased from 140,000 in 1964 to 191,000 in 1965

According to the federal report, 14,330,549 hunting licenses were sold in the nation last year. The total cost to hunters was $75,172,809.47. "It is no surprise that Pennsylvania leads the nation in hunting license sales," Game Commission Executive Director Glenn L. Bowers said.

Why the Frey Economy Gate was Built

Dear Gate User:

For many years there has been a need for a GOOD steel gate. There have been many different metal gates on the market but none have all the features desired by people who use gates regularly. I have been using gates of many kinds for many years and after being knocked down, stuck by splinters, cut by sharp edges and even had a bull come through a gate after me, I decided to build the BEST GATE THAT COULD BE BUILT, one that would hold stock, not sag, not break down, and not have any wide panels to catch wind, or any sharp edges, to cut anyone or their stock. The FREY ECONOMY GATE has been accepted by many people in the livestock and horse business. I am aware there is no such thing as a perfect gate and there will never be, but I believe that you will agree with our many customers who have used the FREY ECONOMY GATE, that the FREY ECONOMY GATE is the best gate on the market.

There are lighter weight and lower cost gates on the market, but when considering all facts and points, FREY ECONOMY GATES give you the most for your money.

Due to customer demand we now have a complete line of all-steel, all welded livestock handling equipment. If you need something special send us plans and specifications and we will be glad to bid on it.

FRED FREY

FREY ECONOMY GATES GIVE YOU MORE

- DESIGN—By a cattleman for the stockman and horseman.
- STRENGTH—Light weight tubular steel, all welded construction.
- SAFETY—There are no sharp edges to cut you or your stock.
- HANDLING EASE—Because they offer very little wind resistance anyone can open or close a FREY ECONOMY GATE in any wind with NO EFFORT.
- VALUE—When all facts are considered and compared to other gates you will find that FREY ECONOMY GATES give you more value than any other type of gate bar none.
- QUALITY—FREY ECONOMY GATES were designed to be the gates available anywhere and they will NEVER SAG.
- ALL NEW STEEL HEAD GATE—2 models to choose, one for side exit and one for straight-thru exit.
- ALL-STEEL ALL-WELDED FARM AND RANCH GATES—8 models to choose from.
- SALT AND MINERAL FEEDERS—with face fly applicator
- ALL METAL PICK-UP STOCK RACK
- STOCK TILT TABLES
- ELECTRIC GATES—imported from England
- FREE STALL

A GATE FOR EVERY NEED

Meat Still A Bargain, AMI Says; Knocks LBJ's Approach To Buying

The meat counter is still the source of the best food bargains, the American Meat Institute reminded housewives recently.

Despite upward price adjustments resulting from reduced livestock supplies in the past 12 months, the American homemaker today is spending a smaller proportion of family income for meat than ever before. And she is getting more for her money.

In 1965, the expenditures for meat were only 4.3 percent of the total disposable income of the average family. This is about one-third less than the 6.3 percent of income spent for meat shortly after World War II.

The price of meat is closely governed by the law of supply and demand. When supplies are short, prices go up. And when housewives avoid higher-priced chops, steaks and roasts, as recently suggested by President Johnson, the price of the cheaper cuts of meat such as round steak, pot roasts and pork shoulder roasts tends to be increased.

The Institute said that it makes no sense to advise all consumers to concentrate their shopping purchases on the so-called lower-priced cuts. This tends to create an imbalance in meat pricing which is a disservice both to consumer and to livestock producers.

There are excellent bargains in the meat case, the Institute said, adding that consumers who formerly "got out their pencil and put on their glasses" when shopping for meat will find it advantageous to do so again.

Increased supplies of cattle are expected to be shipped from the nation's farms and ranches in the next several weeks. Beef production during April was about seven percent above that for the corresponding month of 1965. Beef supplies for the next several months are expected to be moderately above last year.

Pork production during April was down about five percent from a year ago and may be slightly below this figure during May. However, pork production during the summer months of this year is expected to be about five percent above the same months of 1965.

Total meat supplies for the year are estimated at 165 pounds per person, including 99 pounds of beef, 57.5 pounds of pork, 5 pounds of veal and 3.5 pounds of lamb and mutton.

● Management

(Continued from Page 17)

or storekeeper — is his ability to manage all the resources available, to adjust to uncontrollable and unpredictable situations, to have a 'sixth sense' that anticipates problem situations and the intelligence and skill of making good management decisions on time and at the right time." McAllister explains.

He adds, "These things tend to be a visual display of the fact that the farmer has good management ability. Good managers make bigger incomes and, therefore, accumulate capital and land so their farm business grows. As the business grows it can support more and larger equipment, attractive buildings and other signs of prosperity."

He points out that good farmers tend to gravitate toward the best quality farm land. "Admittedly," McAllister says, "some farms can be too small or too poor and some enterprises have low earning power that even a good manager would find it difficult to make a success. But a good manager will recognize the limitations and do something about it rather than let them limit his success the rest of his life."

A farmer's management ability is always evident. "As an example," McAllister says, "Right now as farmers plant their crops they are following management procedure that will have a big influence on their success for the rest of the year. One of the basic weaknesses of poor managers is their failure to control the little things that make up the whole management job. By that I mean such things as failure to see that corn planters are working correctly before planting 100 acres — and three weeks later find there is only two-thirds of a stand. The tendency is blame the seed, the weather or somebody except yourself. In many cases, management was at fault — wrong size seed plates, worn plates, didn't check out planter for accuracy, planting at too high a speed, planting too deep, poorly prepared seed bed or other types of human errors that good management prevents."

Management is doing things right or seeing that they get done correctly — and this means looking after details, McAllister points out.

A check list can help a person to develop a system of "thinking through" the details. When a farmer starts a job he could check off in his mind such things as the optimum time for doing a job; the materials and equipment needed to do the job correctly and on time; and the right procedure to follow.

One of the big problems of the farmer, says McAllister, is that he is constantly under so much pressure to get the job done that he doesn't take time to organize the work and follow through on details. But this follow-through on details is likely to be the difference between being average or being in the top 10 percent of successful farmers.

MANY GROUND COVERS

Standard ground covers are pachysandra, myrtle, ivy, but you can use junipers, thyme, sedum, hostas, cotoneasters and Hall's honeysuckle. See your county agent or your local nurseryman for more information.

IF YOU PLANT CORN
